Studies on Flavins

The Preparation of Heavy Atom Derivatives

LÁJOS MARON

Institute of Inorganic and Physical Chemistry, University of Stockholm, S-104 05 Stockholm 50, Sweden

The preparation of the following bromine substituted compounds, required for our X-ray crystallographic investigations, are described: 4-amino-3-bromo-5-nitro-o-xylene, 3-bromo-4-methylamino-5-nitro-o-xylene, 4,5-diamino-3-bromo-o-xylene, 5-amino-3-bromo-4-methylamino-o-xylene, 9-bromo-7,8-dimethylalloxazine, 9-bromo-3,7,8-trimethylalloxazine, 9-bromo-7,8,10-trimethylisoalloxazine, 9-bromo-3,7,8,10-tetramethylisoalloxazine, 9-bromo-1,3,7,8-tetramethylalloxazine, 5-acetyl-9-bromo-5,10-dihydro-7,8-dimethylalloxazine, 5-acetyl-9-bromo-5,10-dihydro-3,7,8-trimethylalloxazine, 5-acetyl-9-bromo-5,10-dihydro-7,8,10-trimethylalloxazine, 5-acetyl-9-bromo-5,10-dihydro-3,7,8,10-tetramethylalloxazine, 5-acetyl-9-bromo-5,10-dihydro-1,3,7,8-tetramethylalloxazine, 5-acetyl-9-bromo-5,10-dihydro-1,3,7,8,10-pentamethylalloxazine, 9-bromo-5,10-dihydro-1,3,7,8,10-pentamethylalloxazine and riboflavin silver-chelate perchlorate.

The vital role of the flavo-proteins in biological redox processes has inspired extensive research on the chemistry of the constituent molecules of this group of enzymes. The research in this field has been reviewed in several recent articles.1–5

The preparation of heavy atom derivatives of flavins is a part of our research project concerning structural studies of flavin compounds in different states of oxidation. The numbering of the atoms forming the alloxazine ring system of the flavins is shown in Fig. 1.

The bromination of 4-amino-5-nitro-o-xylene and 4-methylamino-5-nitro-o-xylene, respectively, in glacial acetic acid-sodium acetate solution afforded I and II. The reduction of I and II with stannous chloride in concentrated hydro-

Fig. 1. The numbering of atoms adopted for the alloxazine molecule.

Acta Chem. Scand. 26 (1972) No. 3
chloric acid gave 4,5-diamino-3-bromo-o-xylene (III) and 5-amino-3-bromo-4-methylamino-o-xylene (IV).

To yield 9-bromo-7,8-dimethylalloxazine (V), 9-bromo-3,7,8-trimethylalloxazine (VI), 9-bromo-7,8,10-trimethylisoalloxazine (VII) and 9-bromo-3,7,8,10-tetramethylisoalloxazine (VIII), III and IV were condensed with alloxan 6 and 3-methylalloxan,7 respectively.

The methylation of V with dimethyl sulphate in dimethylformamide solution 8 gave 9-bromo-1,3,7,8-tetramethylalloxazine (IX).

The reductive acetylation of V, VI, VII, VIII, and IX in acetic acid-acetic anhydride solution with zinc powder 8 afforded 5-acetyl-9-bromo-5,10-dihydro-7,8-dimethylalloxazine (X), 5-acetyl-9-bromo-5,10-dihydro-3,7,8-trimethylalloxazine (XI), 5-acetyl-9-bromo-7,8,10-trimethylalloxazine (XII), 5-acetyl-9-bromo-5,10-dihydro-3,7,8,10-tetramethylalloxazine (XIII) and 5-acetyl-9-bromo-5,10-dihydro-1,3,7,8,10-tetramethylalloxazine (XIV).

The methylation of XIV with dimethyl sulphate in dimethylformamide solution 8 gave 5-acetyl-9-bromo-5,10-dihydro-1,3,7,8,10-pentamethylalloxazine (XV).

The mild acid hydrolysis 8 of XV afforded 9-bromo-5,10-dihydro-1,3,7,8,10-pentamethylalloxazine (XVI).

To yield riboflavine silver-chelate perchlorate (XVII), riboflavine perchlorate was treated with silver nitrate in slightly acidic acetone solution. The crystal and molecular structure of VIII,9 XIV,10 XV,11 and XVI12 has been determined by X-ray diffraction methods.

**EXPERIMENTAL**

All melting points are uncorrected. Evaporations were carried out under reduced pressure at a bath temperature below 40°.

4-Amino-3-bromo-5-nitro-o-xylene (I). 4-Amino-5-nitro-o-xylene (16.6 g) and sodium acetate (8.5 g) were dissolved in acetic acid (100 ml). Bromine (16 g) dissolved in acetic acid (50 ml) was added with stirring during 2 h at room temperature. A few crystals of iodine were used as catalyst. The stirring was continued for 3 h, the acetic acid evaporated in vacuo and the residue treated with water. Recrystallization from acetic acid gave crystals (18.0 g), m.p. 128—130°. (Found: C 39.1; H 3.73; N 11.3. Calc. for C6H5BrN2O2: C 39.2; H 3.73; N 11.4.)

3-Bromo-4-methylamino-5-nitro-o-xylene (II). 4-Methylamino-5-nitro-o-xylene (18.0 g) sodium acetate (8.5 g) and a few crystals of iodine were dissolved in acetic acid (100 ml) and treated with bromine (16 g) dissolved in acetic acid (50 ml) with stirring for 2 h at room temperature. The stirring was continued for 3 h, the acetic acid evaporated in vacuo and the residue treated with water. Recrystallization from ethanol gave crystals (19 g), m.p. 85—87°. (Found: C 41.8; H 3.85; N 10.8. Calc. for C6H11BrN2O2: C 41.9; H 3.91; N 10.9.)

4,5-Diamino-3-bromo-o-xylenedihydrochloride (III). 4-Amino-3-bromo-5-nitro-o-xylene (24 g) was dissolved in 37 % hydrochloric acid (250 ml) and treated with SnCl2.H2O (110 g) with stirring. The solution was heated to boiling for 15 min and cooled to room temperature. The mixture was neutralized with sodium hydroxide (300 g) dissolved in water (400 ml) and extracted with ethyl ether; the ether extract was dried with sodium sulphate and filtrated. The diamine was precipitated with hydrogen chloride as the dihydrochloride. Recrystallization from ethanol-water 1:1 containing some hydrochloric acid gave crystals (21 g), m.p. 125—127°. (Found: C 33.3; H 4.05; N 9.7. Calc. for C6H11BrCl2N2: C 33.4; H 4.29; N 9.7.)
5-Amino-3-bromo-4-methylamino-o-xylene dihydrochloride (IV). 3-Bromo-4-methylamino-5-nitro-o-xylene (25.8 g) was dissolved in 37% hydrochloric acid (250 ml) and treated with SnCl₂•2H₂O (110 g) with stirring. The solution was heated to boiling for 15 min and cooled to room temperature. The mixture was neutralized with sodium hydroxide (300 ml) dissolved in water (400 ml) and extracted with ethyl ether. The ether extract was dried with sodium sulphate and filtered. The diaminopyridine was obtained by recrystallization from ethanol-water containing some hydrochloric acid gave crystals (30 g), m.p. 120–122°. (Found: C 35.8; H 4.70; N 9.3. Calc. for C₃H₅BrClN₂: C 35.9; H 4.69; N 9.3.)

9-Bromo-7,8-dimethylalloxazine (V). 4,5-Diamino-3-bromo-o-xylene dihydrochloride (5.8 g) was dissolved in acetic acid (150 ml) containing sodium acetate (3.3 g) with stirring at 70°. Alloxan monohydrate (4.8 g) and boric acid (1.9 g) were dissolved in acetic acid (50 ml) at 70°. The two solutions were brought together and stirred overnight. The precipitated alloxazine was filtered off and washed with water and acetic acid. Recrystallization from acetic acid gave crystals (8 g), m.p. 325–327°. (Found: C 44.8; H 2.75; N 17.4. Calc. for C₁₉H₂₀BrN₂O₄: C 44.9; H 2.82; N 17.5.)

9-Bromo-3,7,8-trimethylalloxazine (VI). 4,5-Diamino-3-bromo-o-xylene dihydrochloride (5.8 g) was dissolved in acetic acid (150 ml) containing sodium acetate (3.3 g) with stirring at 70°. 3-Methyl-alloxan monohydrate (5 g) and boric acid (1.9 g) were dissolved in acetic acid (50 ml) at 70°. The two solutions were brought together and stirred overnight. The precipitated alloxazine was filtered off and washed with water and acetic acid. Recrystallization from acetic acid gave crystals (8.2 g), m.p. 335–340°. (Found: C 46.5; H 3.25; N 16.7. Calc. for C₁₉H₂₀BrN₂O₄: C 46.6; H 3.31; N 16.6.)

9-Bromo-7,8,10-tetramethylalloxazine (VII). 5-Amino-3-bromo-4-methylamino-o-xylene dihydrochloride (4 g) was dissolved in water (100 ml) with stirring at 90° and alloxan monohydrate (3 g) was added in one portion. The stirring was continued for 20 min and the precipitated alloxazine was filtered off, washed with water and dried. Recrystallization from acetic acid-water 2:1 gave crystals (3.6 g), m.p. 270–272°. (Found: C 46.6; H 3.23; N 16.7. Calc. for C₁₉H₂₀BrN₂O₄: C 46.6; H 3.31; N 16.7.)

9-Bromo-3,7,8,10-tetramethylalloxazine (VIII). 5-Amino-3-bromo-4-methylamino-o-xylene dihydrochloride (4 g) was dissolved in water (100 ml) with stirring at 90° and 3-methylalloxan monohydrate (3.5 g) was added in one portion. The stirring was continued for 20 min and the precipitated alloxazine was filtered off, washed with water and dried. Recrystallization from acetic acid-water 2:1 gave crystals (3.5 g), m.p. 246–248°. (Found: C 48.3; H 3.61; N 16.0. Calc. for C₁₉H₂₀BrN₂O₄: C 48.2; H 3.75; N 16.0.)

9-Bromo-1,3,7,8-tetramethylalloxazine (IX). 9-Bromo-7,8-dimethylalloxazine (3.2 g) and potassium carbonate (4 g) in dimethylformamide (35 ml) were heated to 90° with stirring. Into the reaction mixture dimethyl sulphate-dimethylformamide 1:1 (9.5 ml) was added dropwise after 1 h. The stirring was continued for 1 h and potassium carbonate (2.4 g) was added again. After 3 h of stirring the dimethylformamide was evaporated in vacuo and the residue was washed with 2 M ammonium hydroxide and water. Recrystallization from the acetic acid gave crystals (3 g), m.p. 240–245°. (Found: C 48.0; H 3.70; N 16.0. Calc. for C₁₉H₂₀BrN₂O₄: C 48.1; H 3.75; N 16.0.)

5-Acetyl-9-bromo-3,10-dihydro-7,8-dimethylalloxazine (X). 9-Bromo-7,8-dimethylalloxazine (4 g) was dissolved in acetic acid-acetic anhydride 1:1 (80 ml) and heated to boiling with stirring. Zinc powder (4 g) was added during 1 h. The refluxing was continued for 30 min, the mixture filtered hot and evaporated in vacuo. The residue was washed with water, dissolved in 1 M sodium hydroxide and precipitated with acetic acid. Recrystallization from acetic acid gave crystals (2.5 g), m.p. 280–282°. (Found: C 46.0; H 3.51; N 15.2. Calc. for C₁₉H₂₀BrN₂O₄: C 46.0; H 3.69; N 15.3.)

5-Acetyl-9-bromo-5,10-dihydro-3,7,8-trimethylalloxazine (XI). 9-Bromo-3,7,8-trimethylalloxazine (5 g) was dissolved in acetic acid-acetic anhydride 1:1 (100 ml) and heated to boiling with stirring. Zinc powder (5 g) was added during 1 h. The refluxing was continued for 30 min, the mixture filtered hot and evaporated in vacuo. The residue was washed with water, then dissolved in 1 M sodium hydroxide and precipitated with acetic acid. Recrystallization from acetic acid gave crystals (3 g), m.p. 290–295°. (Found: C 47.4; H 4.02; N 14.7. Calc. for C₁₉H₂₀BrN₂O₄: C 47.5; H 3.99; N 14.8.)

5-Acetyl-9-bromo-5,10-dihydro-7,8,10-tetramethylalloxazine (XII). 9-Bromo-7,8,10-trimethylalloxazine (4 g) was dissolved in acetic acid-acetic anhydride 1:1 (80 ml) and heated to boiling with stirring. Zinc powder (4 g) was added during 1 h. The refluxing

Acta Chem. Scand. 26 (1972) No. 3
was continued for 30 min, the mixture filtered hot and evaporated in vacuo. The residue was washed with water, then dissolved in 1 M sodium hydroxide and precipitated with acetic acid. Recrystallization from acetic acid gave crystals (2.5 g), m.p. 350°. (Found: C 47.3; H 3.96; N 14.7. Calc. for C₁₆H₁₃Br₉N₀₂: C 47.5; H 3.99; N 14.8.)

5-Acetyl-9-bromo-5,10-dihydro-3,7,8,10-tetramethylalloxazine (XIII). 9-Bromo-3,7,8,10-tetramethylalloxazine (2 g) was dissolved in acetic acid-acetic anhydride 1:1 (40 ml) and heated to boiling with stirring. Zinc powder (2 g) was added during 1 h. The refluxing was continued for 30 min, the mixture filtered hot and evaporated in vacuo. The residue was washed with water, then dissolved in 1 M sodium hydroxide and precipitated with acetic acid. M.p. 330°. (Found: C 48.9; H 4.38; N 14.1. Calc. for C₁₆H₁₃Br₉N₀₂: C 48.9; H 4.36; N 14.2.)

5-Acetyl-9-bromo-5,10-dihydro-1,3,7,8-tetramethylalloxazine (XIV). 9-Bromo-1,3,7,8-tetramethylalloxazine (2 g) was dissolved in acetic acid-acetic anhydride 1:1 (40 ml) and heated to boiling with stirring. Zinc powder (2 g) was added during 1 h. The refluxing was continued for 30 min, the mixture filtered hot and evaporated in vacuo. The residue was washed with water, then dissolved in 1 M sodium hydroxide and precipitated with acetic acid. Recrystallization from acetone gave crystals (1 g), m.p. 228—230°. (Found: C 49.0; H 4.46; N 14.1. Calc. for C₁₆H₁₃Br₉N₀₂: C 48.8; H 4.36; N 14.2.)

5-Acetyl-9-bromo-5,10-dihydro-1,3,7,8,10-pentamethylalloxazine (XV). 5-Acetyl-9-bromo-5,10-dihydro-1,3,7,8-tetramethylalloxazine (2 g) and potassium carbonate (4 g) in dimethylformamide (30 ml) were heated to 60°C with stirring. Dimethylsulphate-dimethylformamide 1:1 (4.7 ml) was added dropwise to the reaction mixture during 1 h and the stirring was continued for 3 h. The dimethylformamide was evaporated in vacuo and the residue was treated with water, the pH adjusted to 5 with acetic acid and the precipitate filtered. Recrystallization from ethanol gave crystals (0.7 g), m.p. 235—236°C. (Found: C 50.2; H 4.95; N 13.8. Calc. for C₁₆H₁₃Br₉N₀₂: C 50.1; H 4.70; N 13.8.)

9-Bromo-5,10-dihydro-1,3,7,8,10-pentamethylalloxazine (XVI). 5-Acetyl-9-bromo-5,10-dihydro-1,3,7,8,10-pentamethylalloxazine (1 g) was heated in ethanol-2 M hydrochloric acid 1:1 (40 ml) to 80°C for 2 h. The precipitate was filtered off and dried. Recrystallization from ethanol gave crystals (0.4 g), m.p. 238—240°C. (Found: C 49.5; H 4.41; N 15.3. Calc. for C₁₆H₁₃Br₉N₀₂: C 49.3; H 4.69; N 15.3.)

Riboflavin silver-chelate perchlorate (XVII). Riboflavin (0.3764 g) was dissolved in acetone (20 ml) containing perchloric acid (0.2100 g) at 40°C. Silver nitrate (0.1699 g) was dissolved in acetone (30 ml) at 40°C. The two solutions were brought together and slowly crystallized to give crystals (0.600 g), m.p. 285—290°C with decomposition. (Found: C 35.0; H 3.61; N 9.4. Calc. for: C₁₉H₂₁AgCl₇N₂O₁₀: C 34.9; H 3.62; N 9.5.)
